

Todo List App Report

Project Title

Todo List App

Introduction

The Todo List App is a simple web application developed using HTML, CSS, and JavaScript. It helps users organize and manage their daily tasks efficiently. The application provides an easy-to-use interface for adding, completing, and deleting tasks. It also stores tasks using the browser's Local Storage, ensuring that tasks remain available even after refreshing the page.

Objective

The main objective of this project is to develop a responsive and interactive Todo List application that demonstrates the use of HTML, CSS, and JavaScript in creating dynamic web applications.

Technologies Used

HTML5

CSS3

JavaScript (ES6)

Features

Add new tasks

Mark tasks as completed

Delete tasks

Responsive and user-friendly interface

Local Storage support for saving tasks

Attractive and simple design

Project Structure

Todo-List-App/

|— index.html

|— style.css

|— script.js

|— README.md

|— Report.docx

|— output.png

Working of the Application

The user enters a task in the input field.

Clicking the Add button adds the task to the list.

Users can mark tasks as completed.

Users can delete tasks that are no longer needed.

All tasks are stored in the browser's Local Storage and are automatically loaded when the application is reopened.

Output

The application displays a clean and responsive Todo List interface where users can manage their daily tasks efficiently.

(Insert your output.png screenshot here in the Word document.)

Future Improvements

Edit existing tasks

Add task priorities

Add due dates and reminders

Search and filter tasks

Dark mode support

Drag-and-drop task management

Conclusion

The Todo List App successfully demonstrates the implementation of HTML, CSS, and JavaScript for building an interactive web application. It provides a practical solution for managing daily tasks while improving understanding of DOM manipulation, event handling, and Local Storage.
